In the past, before technology was used to monitor the weather accurately, people looked at the skies, watched how animals and plants behaved, and relied on signs and superstitions to forecast the weather. Crows are black birds, and they are very ugly. But they are also very clever. Or perhaps, since they have extremely long lives, they have time in which to collect a great deal of information. For instance, they have developed an excellent method of getting walnuts out of their shells. The first stage was to drop them from a height. If they fell on a soft surface they didn't break; if they fell on a hard surface like a road, they often did. If they didn't, however, passing cars would crush the walnuts. But one problem remained. It is difficult for a crow to eat crushed walnuts when a lot of cars are passing. In the end, this problem, too, was solved. They started to drop the walnuts just ahead of the traffic lights.

**50. From the passage, we learn ----.**

- A) all about the life-style of the crow
- B) why the crow lives longer than most other birds
- C) how the crow manages to eat the soft, inside part of the walnut
- D) how the crow's habits are a threat to the driver
- E) why birds are often described as "brainless"

- B) are a major threat to safety on roads

- B) is necessary since so many are killed on the roads
- C) is important because it enables them to collect and test a lot of facts
- D) gives them an advantage over other birds
- E) has never been proved
